

(A)

Prisoner's dilemma

$$\begin{pmatrix} b-c & -c \\ b & 0 \end{pmatrix}$$

Direct reciprocity

$$\begin{pmatrix} (b-c)/(1-w) & -c \\ b & 0 \end{pmatrix}$$

Network reciprocity

$$\begin{pmatrix} b-c & H-c \\ b-H & 0 \end{pmatrix}$$

Kin selection

$$\begin{pmatrix} (b-c)(1+r) & br-c \\ b-r & 0 \end{pmatrix}$$

Indirect reciprocity

$$\begin{pmatrix} b-c & -c(1-q) \\ b(1-q) & 0 \end{pmatrix}$$

Group selection

$$\begin{pmatrix} (b-c)(m+n) & (b-c)m-cn \\ bn & 0 \end{pmatrix}$$

(B)

- Kin selection (genetic relatedness, r)
- Indirect reciprocity (social acquaintanceship, q)
- Group selection (number of groups, m)
- Direct reciprocity (probability of next round, w)
- Network reciprocity (number of neighbors, k)
